Directly interacts with IKK-GAMMA/NEMO. Heterodimers form the active complex. The tripartie complex can also bind to MAPSK14/NIK, MEKK1, IKAP and IKB-alpha-P65-P50 complex. A weak interaction with TRAF2 cannot be excluded. Part of a complex. Composed of NCOA2, NCOA3, IKKB, IKBKG and CREBBP.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- TISSUE SPECIFICITY: Widely expressed.
-!- FTM: Phosphorylated by MAPSK14/NIK, AKT and to a lesser extent by MEKK1, and dephosphorylated by PP2A. Autophosphorylated.
-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=21968797; PubMed=11971985; MCOA2; NCOA3; IKKB AND IKBKG. Am. J. Physiol. 278-c45-(2000).

CC -1- FUNCTION: Phosphorylates inhibitor/NF-kappa-B complex and
the dissociation of the inhibitor. Also phosphorylates
ultimately the degradation of the inhibitor. Also phosphorylates

CC Ultimately the degradation of the inhibitor. Also phosphorylates

MCA3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                              when dephosphorylated.
SUBDNIT: Preferentially found as a heterodimer with IKK-beta but subUNIT: Preferentially found as a heterodimer. Birectly interacts with IKK-gamma/NEMO. Heterodimers form the active complex. The tripartite complex can also bind to MARBAIA/NIK, MEKKI, IKAP and IKB-alpha-P65-P50 complex. A weak interaction with TRARZ cannot be excluded. Part of a complex composed of NCOA2, NCOA3, IKKB, IKBKG and CREBBP (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Name=3: Synonyme=Delta H;
IsoId=Q60680-3; Sequence=VSP_004868, VSP_004869;
TISSUE SPECIFICITY: Ubiquitcous only for isoform 1, isoforms 2 and 3 are expressed predominantly in brain and T-lymphocytes.
DEVELOPMENTAL STAGE: Maximally expressed at E7 day followed by E11, E15 and E17 days. In the limb development, its expresseion predominates in the limb buds at E12.5 day.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           þ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- PTM: Phosphorylated by MAP3K14/NIK, AKT and to a lesser extent MEKK1, and dephosphorylated by PP2A. Autophosphorylated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATP (BY SIMILARITY).

Regulation of SKC-3 (pCIPACTR/AIB-1/RAC-3/TRAM-1) coactivator

Regulation of SKC-3 (pCIPACTR/AIB-1/RAC-3/TRAM-1) coactivator

Activity by I kappa B kinase.";

Mol. Call. Biol. 22:3549-3561 (2002).

-I-FUNCTION: Phosphorylates inhibitors of NF-kappa-B thus leading to

the dissociation of the inhibitor/NF-kappa-B complex and

ultimately the degradation of the inhibitor. Also phosphorylates

NCOA3 (By similarity).

-I-SUBUNIT: Preferentially found as a heterodimer with IKK-aipha but

also as a homodimer. Directly interacts with IKK-aipha but

also bind to MEKKI, MAP3XI4/NIK, IKAP and IKB-aipha-P65-P50

complex. Phosphorylated IKB-aipha and IKB-aipha-P65-P50

complex. Pound in a complex composed of NCOA2, NCOA3, IKBKG

"Coordinate regulation of ikappaB kinases by mitogen-activated protein kinase kinase kinase 1 and NF-kappaB-inducing kinase.";
Mol. Cell. Biol. 18:7336-7343(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=20178139; PubMed=10712233;
Jobin C., Sartor R.B.;
in The I kappa B/NF-kappa B system: a key determinant of mucosal inflammation and protection.";
Am. J. Physiol. 278:C451-C465(2000)
-!- FUNCTION: Phosphorylates inhibitors of NF-kappa-B thus leading to the dissociation of the inhibitor/NF-kappa-B complex and ultimately the degradation of the inhibitor. Also phosphorylates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBUNIT: Preferentially found as a heterodimer with IKK-alpha but also as a homodimer. Directly interacts with IKK-gamma/NEMO. Heterodimers form the active complex. The tripartite complex can also bind to MEKKI, MAPSKI4/NIK, IKAP and IKB-alpha-P65-P50 complex. Phosphorylated IKB-alpha is further released from the complex. Pound in a complex composed of NCOA2, NCOA3, IKKA, IKBKG and CREBBP (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-OCT-2001 (Rel. 40, Created)

A Glucose transporter expression is developmentally regulated in in vitro derived bovine preimplantation embryos.";

I. Mol. Reprod. Dev. 60:370:376(201).

-!- FUNCTION: Insulin-regulated facilitative glucose transporter.

Binds cytochalasin B in a glucose-inhibitable manner. Seems to be a dual-specific sugar transporter as it is inhibitable by fructose (By similarity).

C -!- SUBCELLULAR LOCATION: Integral membrane protein. Principally intracellular. May move between intracellular vesicles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration (By similarity).

C -!- SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE
                                                                                                                                                            г.

"GLUTX1, a novel mammalian glucose transporter expressed in the central nervous system and insulin-sensitive tissues.";

"GLUTX1, a novel nammalian glucose transporter. Sensitive Glucose transporter.

"GLUTY1, a novel nammalian glucose transporter."

"J Biol. Chem. 275:4607-4612(2000).

"I FUNCTION: Insuliar regulated facilitative glucose transporter. Sensitive Glucose (By similarity).

"I FUNCTION: Integral membrane protein. Principally intracellular. May move between intracellular vesicles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration (By similarity).

"I ISSUE SPECIFICITY: Highly expressed in testis, but not in testicular carcinoma. Lower amounts present in most other tissues."

"INDUCTION: In testis, downregulated by estrogen.

"INDUCTION: In testis, downregulated by estrogen.

"I SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE
                                                                                                                                                                                                                                                                                                                                                  Doege H., Schuermann A., Bahrenberg G., Brauers A., Joost H.-G.; "GLUTB, a novel member of the sugar transport facilitator family with glucose transport activity."; "Biol.                                                                                                                                                           fructose.

-I-SUBCELLULAR LOCATION: Integral membrane protein. Principally intractose.

-Intracellular: May move between intracellular vesicles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration (By similarity). Insulin induces a change in the intracellular localization and gives rise to insertion in the plasma membrane.

-I-TISSUB SPECIFICITY: Highest level of expression in placenta and testis. Highly expressed in adult and pubertal testis, but not prepubertal testis. Lower levels of expression in brain, liver, heart, kidney, fat and skeletal muscle.

-I-INDUCTION: Inhibited under glucose deprivation.

-I-INDUCTION: Inhibited under glucose deprivation.

-IRANSPORTERS SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. ```
SUBCELLULAR LOCATION: Integral membrane protein. Principally intracellular. May move between intracellular vesicles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration.

TISSUE SPECIFICITY: Highly expressed in adult and pubertal testis, but not prepubertal testis. Moderate expression in hypothalamus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Doege H., Schuermann A., Bahrenberg C., Brauers A., Joost H.-G.; GLUTB, a novel member of the sugar transport facilitator family with "GLUTB, a novel member of the sugar transport facilitator family with J. Biol. Chem. 275:16275-16280(2000).
-!- FUNCTION: Insulin-regulated facilitative glucose transporter.
- Binds cytochalasin B in a glucose-inhibitable manner. Seems to be a dual-specific sugar transporter as it is inhibitable by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Various endothelial growth factor receptor 2 precursor - Japanese quail

Valternate names: Quail endothelial kinase 2; Quek 2
C;Species: Coturnix coturnix japonica (Japanese quail)
C;Date: 31-Dec-1996 #sequence_revision 31-Dec-1996 #text_change 24-Sep-1999
C;Accession: JC4954

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                  (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SARLIER
                                                                                                                Sequence 319, Application US/08311731A
Patent No. 6583266
GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 411
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
